

Reflection note - implementation of the infant feeding policy

The reflection note is an integral part of the designation process for community child health services seeking recognition as a Baby-Friendly Community Health Service. It is completed after the infant feeding policy has been finalized.

In this note, describe how you plan to implement your new infant feeding policy. How will you communicate the policy to staff, management, and service users? Outline your strategy for training and updating staff to ensure successful implementation. Consider potential challenges that may arise during the process and explore ways to address them effectively. By proactively identifying obstacles and planning solutions, you can facilitate a smoother transition and ensure that the policy is seamlessly integrated into practice

Our reflections:
